P-091002 A-603445 Multi Repeat Offender Program System 2/07/2017

This document lists the high level deliverable features of an application and system to be created to handle data for Sparks Police Department (SPD) and SPD delegated and associated law enforcement agencies Repeat Offender Program (ROP). Blue Cover Six LLC (BCS) Is privileged to collaborate with SPD to author this technology.

Problem to be Solved

There exists a spreadsheet of data representing the list of offenders and offender associations.

- The data model is poor and inflexible. Adding many to many associations is not possible.
- The data cannot be added to in the field or easily from a device.
- The data cannot be shared to collaborate with others easily or robustly.
- The overall user experience in trying to maintain the data is poor and cannot be • expanded upon in a way that is desired by the consumers of the data.
- Data reflects Criminal Justice Information and must be be stored and used in compliance • with CJIS standards.

ROP APP System Overview

The application will be created to work on with web browsers as the delivery mechanism and so will function on Internet enabled devices that can browse the web.

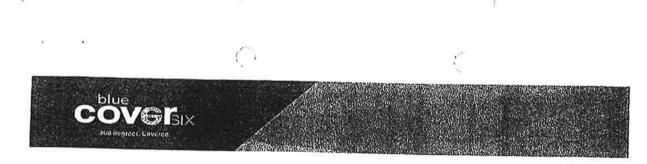

Design Guidelines

- User experience Optimized for mobile use but tested for responsive layout on other devices. •
- Smooth Fluid and Predictable Operation .
- Simplicity of Recognition for the interface
- Clear feedback to user interactions

The application will exist in three parts:

- 1. An Authentication server to handle registration tasks, two factor authentication, and password recovery.
- 2. A database server configured, modeled and encrypted for the system data delivery tasks.
- 3. A application server which is a web server to fetch the data and deliver it to the user on the users device.

Blue Cover Six LLC * info@blueceversix.com * 775-722-5743

2/07/2017

The application system will be delivered in three phases and each phase will receive approval of completion before the next phase commences.

- 1. Security Phase.
 - a. A document and approved design step will ensure this phase has a well understood scope.
 - b. Configuration of servers in a CJIS compliant environment. SPD must approve
 - c. Authentication server can register and and login users with correct roles and provide password self service.
 - d. The app running on devices is demonstrated to not store data locally or leave any CJI on a device when not in use.
- 2. CRUD Phase.
 - a. CRUD stands for Create, Retrieve, Update and Delete. Using the current spreadsheet data the application will provide a simple web based graphical user interface to manipulate these records.
 - b. If Web Mug images can be delivered or obtained so that the image files can be associated with a unique ID in the data these will be added at this phases.
 - c. The goal of phase CRUD is to have a secure and functional app that has few feature but allows officers to get work done.
- 3. Criminal Profile Phase.
 - a. A document and approved design step will ensure this phase has a well understood scope.
 - b. The fields and data will expand to accommodate more detail on each criminal entered.
 - c. The Profile Page will show and allow the creation of extensive associations with roles and relationships.
 - d. Non-criminal Profile pages will reflect individuals that have data and notes in the system and will show a list of relationships to other persons in the system.

Quality Assurance

SPD has the responsibility to respond via email or in person to any version updates of the site to approve of its function and content. Testing will occur at BCS to provide the best possible code, look and feel but the

Blue Cover Six LLC ' Info@blueceversix.com * 775-722-5743

2/07/2017

Quality Assurance is SPD's sole responsibility. After 10 business days, SPD's silence will indicate its consent of the current version, progress of the app system and the project. It should be noted that pages are displayed by browsers on smartphones and computers. Two different browsers may choose to display design elements differently, however much all parties would wish it not be so.

Ownership and Intellectual Property

It is understood by both parties that all media from the application; including art, music, photos, and text whether created wholly or in part by either party, is owned solely by SPD. However, ownership of the underlying code for the website, JavaScript, HTML, XHTML, VB.NET, ASP.NET 3.5, 4.0, XAML, XML, and other programming information will be shared by both partles whom have unlimited and unrestricted license to use and distribute such materials. Including but not limited to other law enforcement agencies.

Copies of the all data or project files will be provided in 5 business days upon demand.

Project Maintenance

blue

As this project is developed every possible effort will be made by BCS and SPD to make sure that this project encompasses the scope of work outlined above. However, both parties may agree as time passes that items fall beyond those scopes and those items will be billed at an hourly rate.

Page or view content and minor layout changes post project completion will be billed at \$40 per hour.

Programming changes will be billed at \$80 dollars per hour.

For any large group of changes or material redesign of the application BCS would be happy to quote a new project.

Scope of Work Defined

This project is understood by both parties to be complete when the ROP App System is running free of errors and containing the functionality as described above. An error is understood to be either a problem that causes the application to hall unexpectedly or posting an error message to the View. BCS will not be held responsible for errors arising from changes or upgrades made by SPD or additions of third party software or changes to the hosting service or operating system environments or conflicts from user install apps or extensions. This includes material changes to browsers and operating systems. BCS will warrant the workmanship of ROP APP to be free of errors for the life of the product.

SPD is responsible to report any errors of the program. Errors must be described, by phone or email as a series of steps that duplicates the error.

Dear Karen,

If you have any questions regarding this quote, please do not hesitate to call.

ASP Interface Details for the Washoe County Sheriff's Department The interface will provide the following:

1. Retrieve image by MNI number

The interface was constructed using Microsoft Active Server Pages (ASP). This ASP web interface uses the parameter WCE as seen in the image tag below. The WCE parameter is composed of two parts, the first is either the letter "T" or "F", and the second is the MNI.

- ✤ The letter "T" is used to specify the return of a thumbnail images.
- The letter "F" specifies the return of the full large images.
- The MNI number specifies the return of the current mugshot associated to that individual if one exists
- If a mugshot does not exist for that MNI or if the MNI is invalid, a default "no photo currently available" photo will be returned as a default.

<IMG

SRC=http://MugshotsWebServerURL/MUGImageASP.ASP?WCI=RetrieveImage&WCE=T9999999898

onError="this.src='/MIS/prototype/img/mug_error.jpg"

As a general rule, error checking should be added, but is not required. A sample error condition has been added to the image tag above. This error code will use a default image available to the client workstation in the event Mugshots is unavailable.

Security

The interface will force the requesting user to pass an Application Username (AUN), Application Password (APW), & local user (LUser) as part of our key. DataWorks Plus will validate the Application Username and Password to allow the interface to function. If the AUN & APW do not validate, DataWorks Plus will not respond to the request. DataWorks Plus will create a table for AUNs & APWs to be managed by the customer. Additionally, DataWorks Plus will log the LUser as part of the log table. Other items that will be logged are the IP address the request was issued from and images by PFN number that were returned.
